Connor McCullough

(863) 242-5303 connor.mccullough@cuanschutz.edu

EDUCATION

PhD in Bioengineering August 2016 – December 2022
University of Colorado Anschutz Medical Campus, Aurora CO, USA
Outstanding Graduate Student, Department of Bioengineering
Outstanding Graduate Student, College of Engineering, Design and Computing

Bachelor of Science in Physics August 2011 – August 2015
University of Florida, Gainesville FL, USA

CURRENT RESEARCH

Development of miniaturized fiber coupled microscopes and neural implants for recording and modulating neural activity using multielectrode arrays, two-photon imaging, and holographically patterned optogenetic stimulation

WORK EXPERIENCE

Postdoctoral Fellow January 2023 - Current
U. of Colorado Anschutz Medical Campus, Dept. of Bioengineering, Aurora CO, USA
- Served as one of three lead engineers on a diverse multi-group collaborative project leading to design, fabrication, characterization, and demonstration of a first of its kind miniature fiber coupled microscope providing microelectromechanical systems (MEMS) mirror scanner based two-photon calcium imaging and spatial light modulator (SLM) generated holographic optogenetic stimulation in freely moving mice, affordably constructed from off the shelf optics
- Lead engineer on a collaborative project with an electrical engineering group developing a neural implant that combines transparent multielectrode arrays and gradient index lenses for simultaneous electrophysiology and two-photon imaging/optogenetics in overlapping neuronal populations

Graduate Student Researcher August 2016 – December 2022
U. of Colorado Anschutz Medical Campus, Dept. of Bioengineering, Aurora CO, USA
- Collaborated with neuroscientists, optical engineers, and machinists to develop a first of its kind neural implant which combined gradient index lenses and tetrodes for two-photon calcium imaging and electrophysiology in overlapping neuronal populations, capable of recording from freely moving mice by optically coupling to a coherent imaging fiber bundle
- Wrote software and GUI for simulation of electrowetting lenses for adaptive optics corrections using finite element analysis in MATLAB

TECHNICAL SKILLS

Biomedical Research: Animal studies, medical device design, experimental protocol development, data organization & analysis, technical writing, scientific communication, statistics

Optics: Optical alignment, characterization, and optimization, optomechanics, adaptive optics, fiber optics, ultrafast pulsed lasers, multiphoton microscopy, nonlinear optics, 2D and 3D imaging

Software/Programming: Zemax, SolidWorks, Python, MATLAB, LabVIEW, C++, Git, Arduino for hardware control, National Instruments acquisition systems, Microsoft Office Suite

Data Analysis: MATLAB/Python analysis (cross-correlation, generalized linear models, etc.) and plotting, high-quality figure/video generation in Adobe Illustrator/InkScape/Adobe Premiere

Prototyping: CAD design, 3D printing, machining, laser cutting

SELECTED COURSES

Clinical Experiences for Bioengineers, Introduction to Laboratory Animal Research, Research Methods for Bioengineers, Optics and Microscopy for Biomedical Research, Advanced MATLAB, Analytic Methods for Engineering Analysis, Numerical Methods for Engineering Analysis, First Order Optical Design, Optical Efficiency and Resolution, Design of High-Performance Optical Systems
